Find the actual isometric perspective views There are a wide variety of isometric models that you can use to professionally present your designs. However, you should also try to find downpages with real isometric views, since there are bad downs with top-down views that also call themselves isometric. Model above is a good example of a true isometric perspective. 2. Search for templates with smart objects Unlike other models, editing an isometric model to position your own design is not easy if it doesn't have smart objects. Photoshop smart object levels allow you to place your own template in a template in just a few clicks. Before downloading, check if your isometric model has arranged layers with smart objects. 3. Note that the background isometric model usually has a customizable background. This means that you can change the background to different colors or even use the template on a transparent background to showcase screenshots on the website. There are also images made with real photos that cannot be replaced. Keep that in mind when choosing downs.
